Environment, Technology and Sustainability (Technologies of Architecture)

Hocine Bougdah, Stephen Sharples

Environment, Technology and Sustainability (Technologies of Architecture) Hocine Bougdah, Stephen Sharples

This second volume in the *Technologies of Architecture* series – the only series of books tuned to the architectural technology syllabus – explores the environmental influences on building design.

Looking particularly at sustainable building, a holistic view is taken, so that the influence of any one set of choices on other areas – such as the trade-off of daylighting against thermal insulation, or the balance needed between heating and ventilation – are not overlooked. The authors discuss available technologies for establishing a suitable microclimate within buildings, for managing the transmission of sound and for minimizing the exploitation of scarce energy and of other resources.

Using the perspective of a designer who needs a sound scientific basis for arriving at the optimum outcome, this valuably informative volume is ideal for architectural technology students, as well as first and second year architecture students.
