High Pressure Processing of Foods Florence Feeherry, Christopher Doona

In *High Pressure Processing of Foods*, an array of international experts interrelate leading scientific advancements that use molecular biology techniques to explore the biochemical mechanisms of spore germination and inactivation by high pressure; investigate the inactivation of different spore species as functions of processing parameters such as pressure, temperature, time, food matrix, and the presence of anti-microbials; propose predictive mathematical models for predicting spore inactivation in foods treated with HPP; address commercial aspects of high pressure processing that include the high pressure equipment and packaging used to achieve the sterilization of bacterial spores in foods; and provide an assessment of the quality of food products preserved by HPP. *High Pressure Processing of Foods* is the landmark resource on the mechanisms and predictive modeling of bacterial spore inactivation by HPP.
