**Simplicial Dynamical Systems (Memoirs of the American Mathematical Society)** Ethan Akin

Abstract A - simplicial dynamical system is a simplicial map  $g: K^* \rightarrow K$  where  $K$  is a finite simplicial complex triangulating a compact polyhedron  $X$  and  $K^*$  is a proper subdivision of  $K$ , e.g. the barycentric or any further subdivision. The dynamics of the associated piecewise linear map  $g: X \rightarrow X$  can be analyzed by using certain naturally related subshifts of finite type. Any continuous map on  $X$  can be  $C^0$  approximated by such systems. Other examples yield interesting subshift constructions.
