## Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications (Remote Sensing Applications Series)

Generating a satisfactory classification image from remote sensing data is not a straightforward task. Many factors contribute to this difficulty including the characteristics of a study area, availability of suitable remote sensing data, ancillary and ground reference data, proper use of variables and classification algorithms, and the analyst's experience. An authoritative text, **Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications** compiles comprehensive review articles to examine the developments in concepts, methods, techniques, and applications as well as focused articles and case studies on the latest on a particular topic.

Divided into four sections, the first deals with various sensors, systems, or sensing operations using different regions of wavelengths. Drawing on the data and lessons learned from the U.S. Landsat remote sensing programs, it reviews key concepts, methods, and practical uses of particular sensors/sensing systems. Section II presents new developments in algorithms and techniques, specifically in image preprocessing, thematic information extraction, and digital change detection. It gives correction algorithms for hyperspectral, thermal, and multispectral sensors, discusses the combined method for performing topographic and atmospheric corrections, and provides examples of correcting non-standard atmospheric conditions, including haze, cirrus, and cloud shadow.

Section III focuses on remote sensing of vegetation and related features of the Earth's surface. It reviews advancements in the remote sensing of ecosystem structure, process, and function, and notes important trade-offs and compromises in characterizing ecosystems from space related to spatial, spectral, and temporal resolutions of the imaging sensors. It discusses the mismatch between leaf-level and species-level ecological variables and satellite spatial resolutions and the resulting difficulties in validating satellite-derived products.

Finally, Section IV examines developments in the remote sensing of air, water, and other terrestrial features, reviews MODIS algorithms for aerosol retrieval at both global and local scales, and demonstrates the retrieval of aerosol optical thickness (AOT). This section rounds out coverage with a look at remote sensing approaches to measure the urban environment and examines the most important concepts and recent research.

### **From reader reviews:**

#### **Velma Stuart:**

In this 21st millennium, people become competitive in each way. By being competitive at this point, people have to do something to make these individuals survive, being in the middle of often the crowded place and notice through surrounding. One thing that at times many people have underestimated this for a while is reading. Yeah, by reading a guide your ability to survive improves then having a chance to remain than others is high. For you personally who want to start reading some sort of book, we give you this particular *Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications (Remote Sensing Applications Series)* book as a beginner and daily reading book. Why, because this book is greater than just a book.

#### **Evelyn Nielson:**

Here is why this specific *Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications (Remote Sensing Applications Series)* is different and trustworthy to be yours. First of all, reading a book is good, however it depends on the content, which is as delicious as food or not. *Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications (Remote Sensing Applications Series)* gives you information deeper, including different ways, you can find any book out there, but there is no book that is similar to *Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications (Remote Sensing Applications Series)*. It gives you a thrill, examining a journey, it opens up your personal eyes about the things that happened in the world, which is maybe can be happened around you. It is easy to bring everywhere, like in an area, café, or even in your approach home by train. When you are having difficulties in bringing the branded book, maybe the form of *Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications (Remote Sensing Applications Series)* in e-book can be your choice.

#### **Adam Sea:**

Reading a publication can be one of a lot of activities that everyone in the world enjoys. Do you like reading books so? There are a lot of reasons why people like it. First, reading a publication will give you a lot of new info. When you read a publication, you will get new information, mainly because a book is one of various ways to share the information or perhaps their idea. Second, reading a book will make an individual more imaginative. When you read through a book, especially a hype book, the author will bring you to definitely imagine the story, how the people do it, anything. Third, you can share your knowledge to others. When you read this *Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications (Remote Sensing Applications Series)*, you could tell your family, friends, along with soon about your book. Your knowledge can inspire others, make them reading a guide.

#### **Sherry Hansen:**

The book titled *Advances in Environmental Remote Sensing: Sensors, Algorithms, and Applications*

(Remote Sensing Applications Series) contain a lot of information on the idea. The writer explains your ex idea with easy means. The language is very simple to implement all the people, so do not necessarily worry, you can easy to read the idea. The book was published by famous author. The author will bring you in the new time of literary works. You can read this book because you can please read on your smart phone, or gadget, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can start their official web-site and also order it. Have a nice learn.
