Subcellular Psychobiology Diagnosis Handbook: Subcellular Causes of Psychological Symptoms Grant McFetridge

Diagnostic Subcellular Psychobiology

This groundbreaking work shows how psychological and physical symptoms arise from damage inside the cell itself. For the first time, psychological symptoms that range from trauma to serious mental illness can be understood as perceptions of biological problems at a subcellular level.

This handbook is specifically designed as a desk reference for therapists and psychiatrists diagnosing and treating clients. Containing over 50 diseases and disorders of the cell, each entry gives a brief description of the cause, an illustration of the subcellular biology, differential diagnosis, and the standard psychological-like techniques that treat these biological issues quickly and effectively.

Radical change to the field of psychology is now possible with this approach, including a needed shift to 'pay for results' billing. This first generation of subcellular cases includes:

- the epigenetic origin of generational, associational, and biographical trauma,
- why trauma techniques sometimes won't work,
- the fungal disease cause for schizophrenic voices,
- how suicidal feelings originate from birth trauma,
- subcellular perceptions that cause spiritual emergencies,
- a cross reference to ICD-10 categories,
- and more...

This Peak States® Therapy volume is a companion to *Peak States of Consciousness* and *The Basic Whole-Hearted Healing® Manual*.
